

“Gee, maybe we could save by using a little *LESS* starch?”

Your corrugator can make better, flatter board once you learn how to use less starch.

Here's a new thought. Use less starch, less water and therefore less energy on your corrugator and you'll save money while improving quality. It's called the Iso-Thermal Process, a joint development using Cargill's FastBreak™ adhesives and Kohler's precision equipment. The Iso-Thermal Process is a new way to improve quality and lower costs — starting with using less.

THE ISO-
THERMAL™
PROCESS
